

LIVE SEMINAR

30-Hour OSHA Outreach Training Program

THIS SEMINAR AT A GLANCE:

- Ensure that you are in full compliance with OSHA's latest rules, regulations and updates
- Protect your organization from costly fines, penalties and legal action due to OSHA non-compliance issues
- Identify and eliminate hazards, address health concerns and create a safer environment for your employees
- Gain valuable information to help maintain safety standards, establish company-wide buy-in and create a safer environment for your employees
- Boost your organization's bottom line
- OSHA Inspections — what to expect, how to prepare and abatement procedures
- Establish an effective record-keeping and retention program

Who should attend?

- Building and facility managers
- Health and safety managers
- Human resources personnel
- Business owners
- Managers and supervisors
- Warehouse Managers
- Team leaders
- Legal counsel
- Insurance professionals
- Workers' Compensation Administrators
- Maintenance professionals

OSHA 30-Hour Outreach Training Program

S E M I N A R S U M M A R Y

Earn your 30-hour OSHA completion card with five days of in-depth training

According to the United States Department of Labor, businesses spend \$170 billion a year on costs associated with work-related injuries and illnesses. This can contribute to decreased employee morale, reduced productivity and higher on-the-job stress, while leading to increased workers' comp claims, higher insurance premiums, retraining costs, absenteeism and lower-quality products and services.

This intensive seminar was created to support OSHA safety initiatives, enhance OSHA compliance and protect employee health and safety

This 30-hour seminar represents excellence in OSHA training. Over five days, your trainer will thoroughly explore hazard identification, prevention and mitigation, as well as OSHA's complex standards, criteria and requirements, delivering information that is easy to grasp. As a result, you'll comprehend more, remember more and be better equipped to apply what you've learned once you've returned to the workplace.

Creating your own safety training and support programs, identifying and eliminating hazards and unhealthy situations, promoting a company-wide culture of safety — everything becomes easier when you are not overwhelmed by too much information in a short time frame. This seminar is interactive, well-balanced, interesting and, most of all — effective.

Benefits of this program:

Your company will benefit in a number of important ways. A healthier, safer work environment means that employees will enjoy their work more, use their time more productively and feel safer and more comfortable while on the job. Lost hours due to illness and injury will diminish, workers will file fewer injury and illness claims and you'll be less likely to incur fines or penalties due to OSHA violations. Plus, by attending this in-depth, week-long seminar, you are committing to one of the highest levels of occupational safety and health training available.

Important Information:

Your instructor is an OSHA Authorized Outreach Trainer who has completed OSHA's Trainer Course in Occupational Safety and Health Standards for General Industry. OSHA provides trainers authorized to teach this program with a list of designated training topics, a set of program guidelines and rules and procedures for conducting the outreach training programs.

To receive your course completion card, your tuition must be paid in full and you must attend all sessions. Your trainer will submit the paperwork to the appropriate OSHA Training Institute Education Center and you will receive your OSHA Course Completion Card within 8 to 10 weeks.

PROGRAM AGENDA

Overview of the Week's Training

- Employers covered by the OSHA Act and exclusions of coverage
- What this training means to you Employee's rights under OSHA Employer's responsibilities under OSHA
- How OSHA inspections are conducted and types of OSHA standards

Safety and Health

- Safety and health programs within the workplace
- Hazard prevention and control
- Job safety analysis
- Ergonomics — definition, risk factors in the employee and the task
- Workplace violence
- Hearing conservation and protection

Bloodborne Pathogens

- Elements of a successful exposure control plan
- Communication of hazards through signs and labels
- Needles and sharps disposal
- Personal Protective Equipment (PPE)
- Universal precautions and general safe work practices
- Immunization and post-exposure follow-up program

Permit-Required Confined Spaces

- Permit-required and non-permit spaces General requirements
- Required forms of warning
- Written entry permit program
- Pre-entry atmospheric testing and required ventilation

Lockout/Tagout

- Purpose, scope and application of a lockout/tagout program
- Lockout/tagout devices, requirements and criteria
- Application and control of energy control devices
- Inspecting, verifying isolation and shutting down machinery and equipment
- Applying and removing lockout/tagout devices

Machine Guarding

- General requirements for all machines
- Abrasive wheel machinery and mechanical power presses
- Hand and portable powered tools and other hand-held equipment
- Oxygen-fuel gas welding and cutting, arc welding and resistance welding

Hazardous Materials

- Flammable and combustible liquids
- Compressed gases
- Safety management of highly hazardous chemicals
- Hazardous waste operation and emergency response

Emergency Action Plans, Fire Prevention Plans and Fire Protection

- Fire prevention and detection systems
- Portable fire extinguishers and standpipe hose systems

Electrical

- Electric utilization systems
- General requirements
- Wiring design, methods, components, equipment and protection
- Safeguards for personnel protection

Hazard Communication

- Purpose of the standard, elements and accessibility of the written plan
- Hazard assessment and inventory listing Safety Data Sheets (SDS) Labeling, training and records retention.
